DESCRIPTORS: *Water supplies, Cooling, Electric
power production, Power plants, Wind, Temperature,
Heat transfer.

Investigations of water-cooling reservoirs of large
size, characteristic of large electric power stations,
have shown the considerable influence of the wind both
on the movement of the transit stream and on the dis-
tribution of the temperatures of the water. At high
wind speeds, equalization of the temperature was ob-
served over the area of the reservoir and in the verti-
cal direction, due to the mixing of the water of the
